**Bridgitte Shen Lee, OD joins Guardion Health Sciences Medical
Advisory Board**

San Diego, California – May 3, 2016 – Guardion Health Sciences (GHS), a leading provider of verifiable and validated solutions in the areas of Ocular Health, is delighted to announce that Dr. Bridgitte Shen Lee has joined its Medical Advisory Board.

“We are delighted to welcome Dr. Shen Lee to our Advisory Board. As the first Doctor of Optometry to join our team, we are excited to be able to collaborate on our strategy of growth and engagement with the Optometric sector, both here in the USA and internationally” said Michael Favish, CEO of GHS.

Dr. Shen Lee is the cofounder of Vision Optique, an innovative high-end optical, advanced contact lens practice, and comprehensive ocular health center, based in Houston TX. In addition, Dr. Shen Lee is the founder of iTravelCE, a unique ‘destination education’ company which provides a bridge between the Asian and American/European optical industries. Her focus on specialty lens technologies, anti-aging eye care, ocular aesthetics, and long term preventive ocular care, along with her biculturalism and understanding of the Asian eye care market, together form a highly valuable skill set.

“As well as our commitment to American eye care, it is our intention to grow our footprint internationally, particularly in the Asian markets. With her extensive experience in product launch, business development, and clinical education, Dr. Shen Lee will make a great addition to our team of highly respected Advisors. We look forward to collaborating with her to increase the understanding of the importance of the Macular Pigment, particularly as it relates to the growing prevalence of high energy visible light exposure” added Mr. Favish.

About Guardian Health Sciences, Inc.

Guardion Health Sciences, Inc. is a specialty health sciences company that develops, formulates and distributes condition-specific medical foods with an initial medical food product that addresses a depleted macular protective pigment, which is a known risk factor for causing age-related macular degeneration (“AMD”), as well as computer vision syndrome (“CVS”). Guardion Health Sciences, Inc. has also developed a proprietary medical device that accurately measures the macular pigment density.

Guardion Health Sciences, Inc. currently develops and distributes a line of medical foods that restores the macular protective pigment to address AMD and CVS under the brand name Lumega-Z®. Guardion Health Sciences, Inc. is using its own proprietary patent-pending technology embodied in a medical device called the MapcatSF™ that measures the macular pigment. The MapcatSF™ is a patent-pending, non-mydratic, non-invasive device that accurately measures the macular protective pigment density, thereby creating an evidence-based protocol that is shared with the patient
